Test information sheet

STI test

A home test for chlamydia, gonorrhoea and trichomonas. You choose a urine sample or a swab (throat, rectal or vaginal), post it to our lab and read your result in your account.

About this test

What is the STI test?

The STI test is a home test kit that checks one sample for three sexually transmitted infections: chlamydia, gonorrhoea and trichomonas.

You take the sample yourself, at home, and post it to our lab. Your result is in your account.

Which infections does the STI test check?

The STI test checks your sample for:

- Chlamydia (Chlamydia trachomatis)
- Gonorrhoea (Neisseria gonorrhoeae)
- Trichomonas (Trichomonas vaginalis)

Urine or swab: which sample do you take?

You choose when you order: a urine sample or a swab. The price is the same for both.

A swab is taken from the throat, the rectum or the vagina. One kit is for one site, so you choose the site on this page and your kit comes with the instructions for that site.

How does the STI test work?

You order the kit, take your sample at home, register your kit in your account and post it to our lab. Novi Labtest makes the kit and manages every step; our accredited lab analyses your sample.

What do you get with your result?

You get a result per infection, negative or positive, in your account. Only you see it.

A lab result is not a diagnosis and doesn't replace advice from a doctor. If you have symptoms, or a result is positive, please contact your doctor or a sexual health clinic.

What the test measures

- Chlamydia trachomatis
- Neisseria gonorrhoeae
- Trichomonas vaginalis

What is in the kit

- Tube stand, to fold
- Instructions
- Return envelope
- Urine collector
- Safety bag
- Absorbent sheet
- Printed kit box
- Shipping envelope
- Transport tube, 1 ml (eNAT)
- Pipette, 3 ml
- Test form

Questions and answers

Which infections does the STI test check?
Chlamydia, gonorrhoea and trichomonas, all three from one sample.

Should I take a urine sample or a swab?
You choose when you order; the price is the same. A swab is for the throat, the rectum or the vagina, one site per kit. [Advice of our lab on which sample fits which situation.]

How soon after possible contact can I test?
[Time after possible contact: advice of our lab.] If you have symptoms, please contact your doctor or a sexual health clinic straight away.

How long until my result?
Your result is ready within [n] working days after our lab has your sample. It's in your account, and we let you know when it's there.

Who sees my result?
Only you. Your result is in your account, and you decide whether you share it, for example with your doctor.

When do I post my sample?
On the day you take it, on a Monday, Tuesday or Wednesday, so it isn't stuck in the post over the

weekend.

Is the result a diagnosis?

No. A lab result is not a diagnosis and doesn't replace advice from a doctor. If you have symptoms or concerns, or a value is outside the usual range, please contact your doctor.
